

Traffic Robot

Cedric Jocelyn

Traffic Robots

Traffic robots are robots that can be manually controlled and be self-dependant. Police officers use them to patrol the streets and pick off any drivers causing trouble to other citizens. They're faster than most cars so they can easily stop street racers, and cars that go above the speed limit. They are also very durable and can whistant a lot of damage so some modified ones are used in the military to stop enemies in their track and go up against tanks.
